This assignment is SOLO. This means you may not look at other student's code or let other students look at your code for these problems.
● Do not hardcode the test cases in your solutions.
● Don't change eval.py, input, and output files
● You need to write your code in the FrontTimes.java file. A skeleton code was given for your convenience to read the input. Don't change the skeleton code.

Given a string and a non-negative int n, we'll say that the front of the string is the first 3 chars, or whatever is there if the string is less than length 3. Return n copies of the front;

Test case :1
Input :
Chocolate
2

Output :
ChoCho

Test case :2
Input :
Chocolate
3

Output :
ChoChoCho

Test case :3
Input :
Abc
 3

Output :
AbcAbcAbc
